Abstract must be stated the result. It is no needed to write the objective, methods, and experimental design. The abstract should be written as a single paragraph. Abstract must be written not more than 300 words.

Suggesting to rewrite

Abstract

Corn is the second most important staple food commodity after rice in Indonesia. However, current corn productivity is insufficient to meet domestic requirements. Enhancing corn productivity through soil quality improvement and appropriate fertilizer packages is essential. This research aimed to identify an effective fertilizer package for corn that includes *Chromolaena odorata* liquid organic fertilizer. Experiments were conducted in Inceptisol Nagari Aua-Kuning, Pasaman District, West Pasaman Regency, at 150 meters above sea level in 2023. The materials used included: Bellarusian Phosphate Rock (PR) with 28% P₂O₅, SP-35 with 36% P₂O₅, and Threesopon Zeofillite containing 51.71% SiO₂ and a CEC of 112.57 cmol kg⁻¹. A completely randomized design with two treatment factors and three replications was employed. The first factor was fertilizer selection with five levels: 0 kg ha⁻¹ PR = 100 ke ha⁻¹ Urea (F0); 100 ke ha⁻¹ PR = 100 ke ha⁻¹ Urea (F1); 200 ke ha⁻¹ PR = 100 ke ha⁻¹ Urea (F2); 50 ke ha⁻¹

productivity through measurement activities, namely by improving soil quality using appropriate amendments and fertilizer packages. Corn cultivation in Indonesia, especially in West Sumatra, is carried out on sub-optimal land, which is in the medium to low soil fertility category (Ministry, 2007). Sufficient fertilization will make plants grow well and produce effectively, but if the soil quality is poor, then fertilization will be wasted. The rising cost of artificial fertilizers is a major problem for corn farmers in Indonesia. It is hoped that by amending the soil through a fertilization package using zeolite, rock phosphate, artificial fertilizer, and liquid organic fertilizer, corn cultivation can increase productivity.

Phosphorus (P) is an element that is indispensable for all forms of life. Even though most of the P applied to the soil is in the form of fertilizer, this turns out to be inefficient because only a small portion of the P applied is utilized by plants (Amarasinghe *et al.*, 2022). Pavinato *et al.* (2020) proved that PR treated with acid increases relative agronomic efficiency by more than 74% compared to TSP fertilizer. Soil in tropical areas is very easily weathered, acidic, and low in phosphorus (P) due to the high Al and Fe content. An adequate P supply is essential to ensure optimal soil and plant productivity. Therefore, it is necessary to improve soil with zeolites to increase the availability of P in acidic soils, as this mineral can fix Fe and Al as a substitute for P (Hasbullah *et al.*, 2020).

Silicate rocks can be a sub-optimal soil amendment or improver and restore soil pH (Bauwhede *et al.*, 2024). GiriyaVeni *et al.* (2021) explained that the application of zeolite can improve overall soil quality due to its unique cation exchange, adsorption, hydration-dehydration, and catalytic properties. Globally, several studies have been conducted to investigate the feasibility of using zeolite to increase crop yields, nutrient use efficiency, and water use efficiency. It is a microporous, crystalline, hydrated silicate of alkaline and alkaline materials with a high CEC and an internal pore structure with the ability to hold nutrients and water molecules inside. It can hold nutrients such as NH₄⁺ and K⁺ ions, which are consequently released slowly to be continuously absorbed by plants.

However, the two do not interact (Table 1 and Figure 1). Treatment with the application of 100 kg ha⁻¹ (Zeolite + Urea) + 75 kg ha⁻¹ SP-36 was significantly increased the pH and was the highest compared to other fertilizer treatments, and it was not significantly different from the application of 150 kg ha⁻¹ (Zeolite + Urea) + 75 kg ha⁻¹ SP-36. In general, the application of PR package fertilizer tended s to increase soil pH but it was is still unable to exceed the influence of the application of Zeolite + Urea. Providing LOF can also increased soil pH; the higher the dose of LOF, the higher the resulting soil pH. pH levels ranging from 6.35 to 6.42 can is supported better growth of corn plants in the field.

Table 1. Effect of fertilizer packages on changes in soil pH at 45 DAP

Fertilizer Packages	LOF Application (ml L ⁻¹)			Average
	0	50	100	
	pH			
0 kg ha ⁻¹ PR + 100 kg ha ⁻¹ Urea	6.27	6.23	6.30	6.27 ^C
100 kg ha ⁻¹ PR + 100 kg ha ⁻¹ Urea	6.03	6.17	6.33	6.18 ^C
200 kg ha ⁻¹ PR + 100 kg ha ⁻¹ Urea	6.46	6.13	6.40	6.33 ^{BC}
50 kg ha ⁻¹ Zeolite + 50 kg ha ⁻¹ Urea + 75 kg ha ⁻¹ SP-36	6.25	6.34	6.50	6.36 ^B
100 kg ha ⁻¹ Zeolite + 100 kg ha ⁻¹ Urea + 75 kg ha ⁻¹ SP-36	6.53	6.56	6.54	6.54 ^A
150 kg ha ⁻¹ Zeolite + 150 kg ha ⁻¹ Urea + 75 kg ha ⁻¹ SP-36	6.57	6.42	6.47	6.48 ^{AB}
Average	6.35 ^B	6.31 ^B	6.42 ^A	
CV (%)	2.04			

The same superscript lowercase letters in rows and the same uppercase letters in columns are not significantly different according to the LSD 5% significance level.

Dear author

I did not see any format changes in the references list, still not following the **UJAT** format.

Please check all references in the list well and format in detail.

Author name format: Last name with abbreviations of first name and middle name, use "and" not "&", (example: Song, J. J. and Soyotong, K.)

Title format: Use sentence case, do not capitalize each word.

Pages format: Volume with pages, (example: 20:220-235)

If the author could not follow, we will postpone publishing.

Thank you very much for your cooperation.

Sincerely
UJAT

dear editor, as we had sent the letter about the publication and about our manuscript to publish, we will wait for the information about that, and when our manuscript will be published at the journal, thank you very much,
Sincerely yours
Dr. jamilah et al

ijjat-aatsea publication <ijjat.publication@gmail.com> kepada saya Sen, 30 Sep, 14.48

Dear author

Read my comment about format references well, I am waiting for your reformat references, the last version still does not follow format, please reformat all the references follow our format carefully.

Thanks

jamilah fatika <jamilahfatika@gmail.com> kepada ijat-aatsea Sen, 30 Sep, 15.07
